Corporate Strategy & Policy Analysis
Section
Office of the CAO
The City of Greater Sudbury

By:

December 2002

Purpose

This research was conducted in order to make statistical comparisons between the opinions of the residents of the City of Greater Sudbury¹ and the residents of a) North Bay, b) Timmins, c) Sault Ste. Marie, d) Thunder Bay, e) Toronto, and f) Other areas (this category includes all other regions of Ontario other than those listed above). The opinions measured were a) quality of life, b) satisfaction with the range of city services, and c) confidence in the economic future of the community.

Procedure

In the context of a random sample public opinion survey of the residents of Ontario, respondents evaluated:

- 1) The quality of life in their community (on a scale anchored at 1-very poor and 5-very good);
- 2) Satisfaction with the range of city services provided in their community (on a scale anchored at 1-very dissatisfied and 5-very satisfied); and
- 3) Degree of agreement that they were confident in the economic future of their community (on a scale anchored at 1-strong disagree and 5-strongly agree).

The data were collected between December 9th and December 16th 2002. There were a minimum of 75 respondents from each of the comparison cities in Northern Ontario, 73 respondents from Toronto, and 242 respondents from "Other" areas.

Results

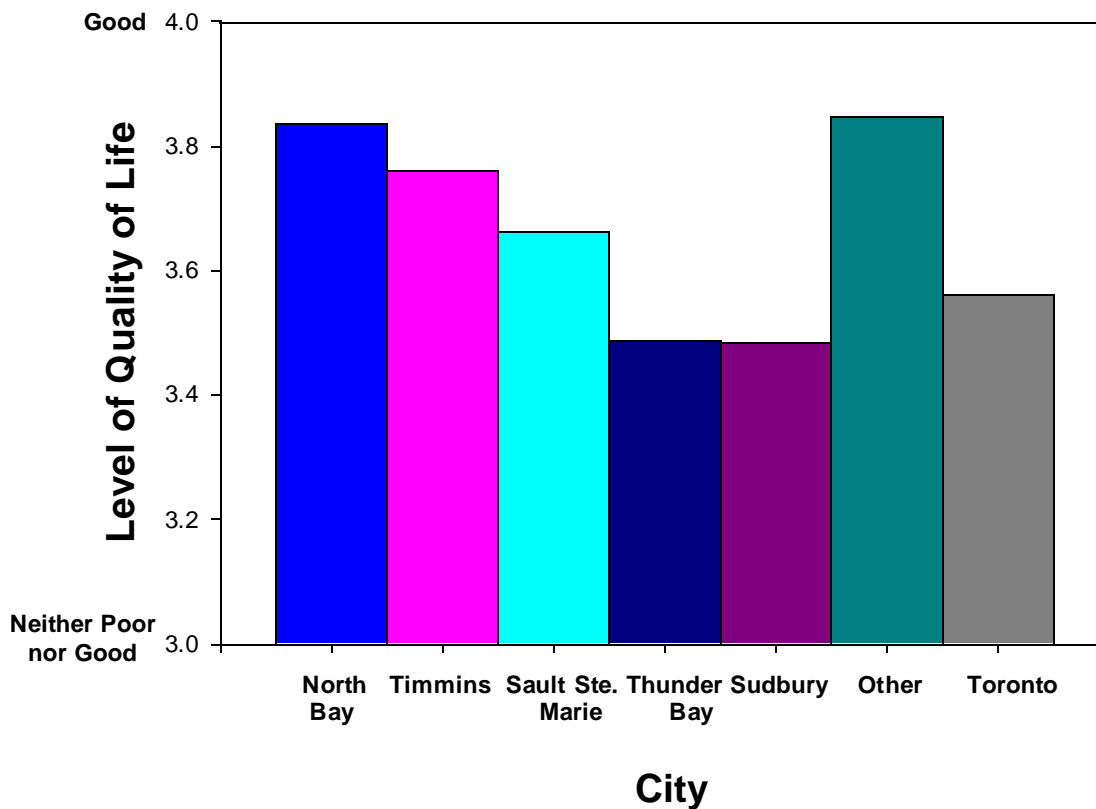

Advanced analyses were conducted to test for differences on the quality of life, satisfaction with the range of city services, and confidence in the economic future measures as a function of city of residence.² For all difference described below, there are less than 5 chances in 100 that a reported difference does not reflect a real difference.

¹

The Sudbury data were collected in the context of the annual survey of city residents.

Quality of Life: On average, the residents of Sudbury rated their quality of life as significantly lower than did the residents of North Bay, Timmins, and "Other" areas. The ratings for Sudbury did not differ from the ratings of Sault Ste. Marie, Thunder Bay, and Toronto.

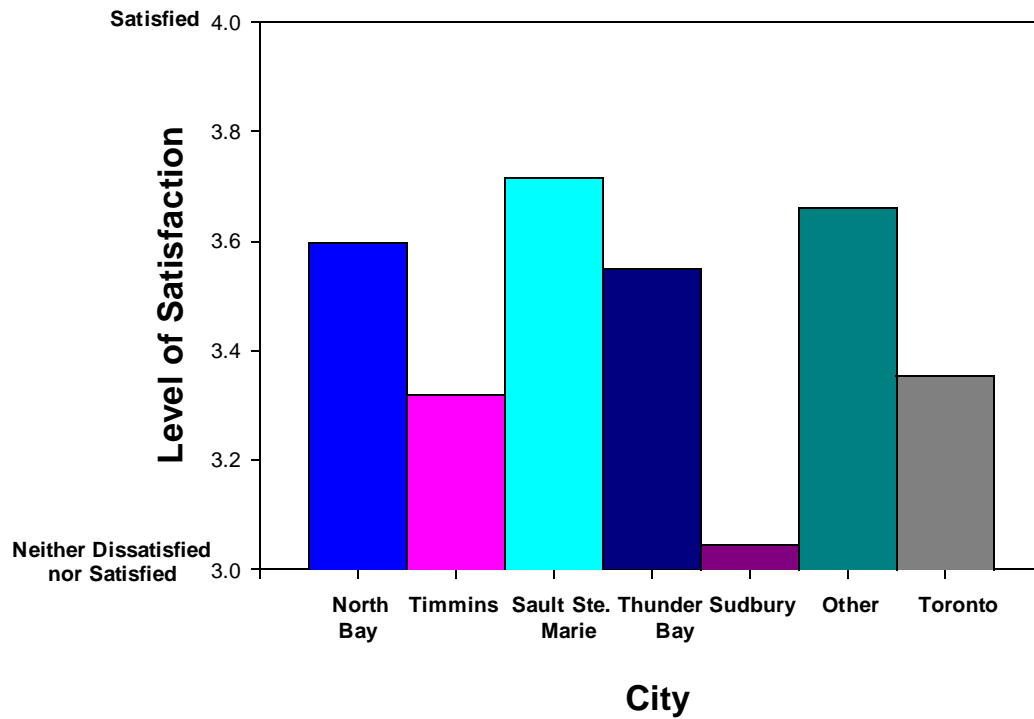

Level of Quality of Life as a Function of City

² Univariate analyses of variance with Fisher's adjusted least significant difference post hoc tests were conducted to test for differences in mean (average) levels of quality of life, satisfaction with the range of city services, and confidence in the economic future between Sudbury and the other cities.

Satisfaction with the Range of City Services: On average, the residents of Sudbury rated their satisfaction with the range of city services as significantly lower than did the residents of all other cities.

Level of Satisfaction with the Range of City Services as a Function of City

Confidence in the Economic Future of the Community: On average, residents of Sudbury have significantly less confidence in the economic future of the community than do residents of Timmins, Toronto, and "Other" areas. Residents of Sudbury have significantly more confidence in the economic future than do residents of Sault Ste. Marie and Thunder Bay. The residents of Sudbury and the residents of North Bay did not differ in terms of their confidence in the economic future of their communities.

Degree of Agreement that the Respondent is Confident in the Economic Future of Their Community as a Function of City

Conclusions

Certainly, the results on satisfaction with the range of city services and quality of life are alarming. Residents of Sudbury are less satisfied with the range of city services than are residents from all other areas. Furthermore, residents of Sudbury rate their quality of life as significantly poorer than do residents of North Bay, Timmins, and "Other" areas. Detailed research should be conducted to address the potential causes of these discrepancies and this research should be used as the foundation for developing an action plan to put Sudbury on top. Finally, further research should address the basis for the reduced economic confidence ratings of the residents of Sudbury relative to the residents of Timmins, Toronto, and "Other" areas. This, too, should be targeted in an action plan.³

³ Caution should be used when interpreting differences as a function city. Whereas, it is true that these differences might reflect real differences between the cities, it is also possible that the differences reflect differences in the kinds of people who choose to live in the various cities (e.g., blue collar versus white collar, politically liberal versus conservative, etc.).

Results by Question

CGS1. Using a scale from one very poor through to five very good, how would you rate the overall quality of life in your community?

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Very poor	37	2.0	2.0	2.0
	Poor	131	7.2	7.2	9.2
	Satisfactory	668	36.5	36.8	46.0
	Good	726	39.7	40.0	86.0
	Very good	255	13.9	14.0	100.0
	Total	1817	99.4	100.0	
Missing	Don't know	11	.6		
Total		1828	100.0		

CGS2. When considering all aspects of the range of services that your municipality provides you with, how would you rate your overall level of satisfaction with these services?

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Very dissatisfied	95	5.2	5.2	5.2
	Dissatisfied	251	13.7	13.8	19.0
	Neither dissatisfied nor satisfied	770	42.1	42.3	61.3
	Satisfied	558	30.5	30.7	92.0
	Very satisfied	146	8.0	8.0	100.0
	Total	1820	99.6	100.0	
Missing	Don't know	8	.4		
Total		1828	100.0		

CGS3. I am confident about the economic future of my community

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Strongly disagree	208	11.4	11.5	11.5
	Disagree	405	22.2	22.4	33.9
	Neither disagree nor agree	704	38.5	38.9	72.8
	Agree	361	19.7	20.0	92.8
	Strongly agree	130	7.1	7.2	100.0
	Total	1808	98.9	100.0	
Missing	Don't know	20	1.1		
Total		1828	100.0		

Descriptive Statistics
